

## US LNG Weekly Recap - Week of 12/12/2025

**Things to Watch:** NGPL issued a force majeure along the lateral that serves Sabine Pass starting Thursday December 11th. This impacted feedgas deliveries to the facility and while some of the 0.4-05.5 Bcf/d of curtailment was offset by increased flows on TETCO and LEAP, volumes remain ~0.2 Bcf/d below pre-outage levels.

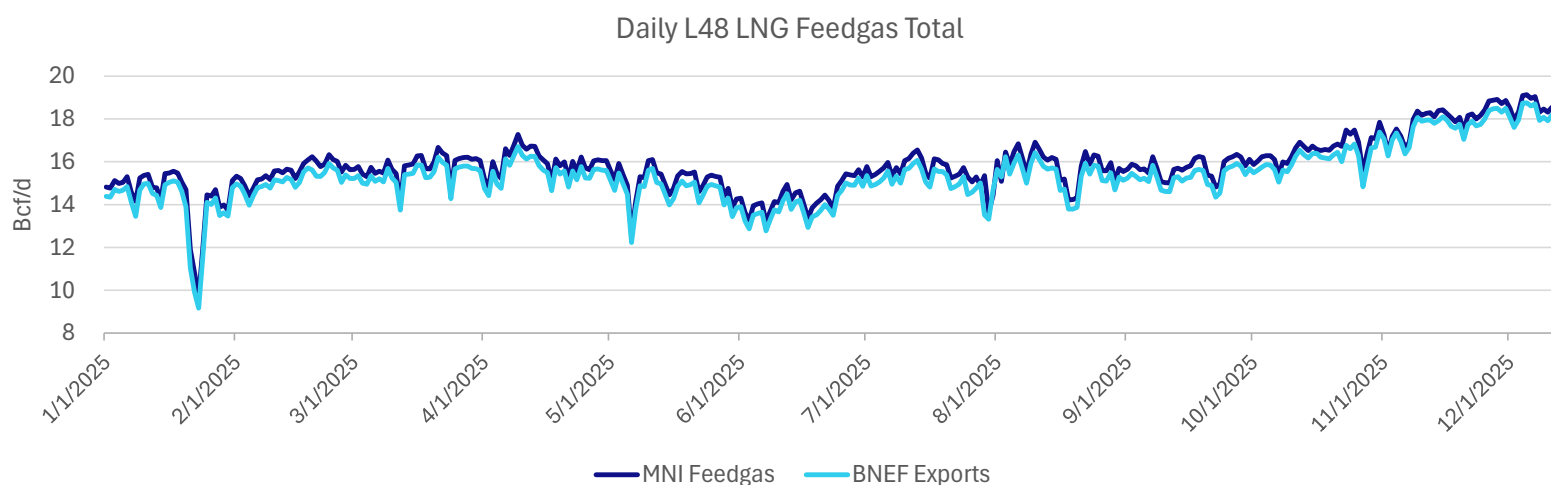

**Weekly Highlights**

**Golden Pass:** FERC approved the facility's request to introduce feedgas into the Train 1 gas turbine. Latest construction update states progress on installation of piping and structural steel for Trains 2 and 3, suggesting both trains remain in the construction phase.

**Plaquemines:** Construction report shows activity continues on Phase 2 of Power Island, which will allow for higher utilization of the facility and a remaining uptick in feedgas demand.

**Port Arthur:** Construction on LNG tanks continued in November, and expect to complete the Tank B roof rise and HDD feed gas pipeline construction in December.

**CP2:** FERC granted request to commence construction of the Moss Lake compressor station, which is part of the CP Express pipeline that will supply feedgas to the facility. Very early stage construction progresses at the facility, with site clearing being the main activity.
